

negative regulation of cell-cell adhesion
regulation of T cell activation
exocrine pancreas development
glomerular visceral epithelial cell development
hyaluronan metabolic process
carbohydrate metabolic process
sulfur compound metabolic process
protein peptidyl-prolyl isomerization
retinoic acid receptor signaling pathway
nephron tubule development
hindbrain development
regulation of transcription, DNA-templated
pectoral fin development
regulation of transcription from RNA polymerase II promoter
oxidation-reduction process

Notch signaling pathway
heart looping
endoderm development
peripheral nervous system development
neural retina development
positive regulation of cell proliferation
axon extension
morphogenesis of embryonic epithelium
diencephalon development
embryonic viscerocranium morphogenesis
camera-type eye morphogenesis
mesoderm development
forebrain development
lymphangiogenesis
pronephric glomerulus morphogenesis
cranial nerve development
negative regulation of cellular response to growth factor stimulus
mesodermal cell migration
extracellular matrix assembly
regulation of fibroblast growth factor receptor signaling pathway
steroid hormone mediated signaling pathway
midbrain development
negative regulation of canonical Wnt signaling pathway
glomerular visceral epithelial cell development
ephrin receptor signaling pathway
regulation of cell differentiation
Wnt signaling pathway
cell fate commitment
axon guidance
brain development
neuron development
cell differentiation
multicellular organism development
